Subject: SOFTT GEN IV

It is a pleasure to be able to provide information regarding the 4<sup>th</sup> Generation SOFTT Tourniquet. As you know, the SOFTT has been approved by the CoTCCC for many years now and is currently used in more than 70 countries. In early 2019, Tactical Medical Solutions released the newest version of the SOFTT, the GEN IV.

We realize that in that past, the Polish military has procured the previous generation SOFTT, however, the newest generation is definitely an improvement over the previous one. The GEN IV still has the traditional features of a true 1.5" (3.81cm) band, metal windlass and tri-ring securing device. However, we have added four new and distinct features to the tourniquet <sup>®</sup> which only makes the SOFTT better.

First, we added a "Retention Clip" which acts as a secondary locking mechanism and allows for easier one-handed applications. We also have a new "elongated windlass" which makes securing the windlass in the clip and tri-ring much easier. Our quick attach buckle has been improved with a smoother buckle which allows for faster compression and easier buckle manipulation. And finally, we reinforced the material to make it even more durable.

It's an honor to be able to provide our tourniquet and look forward to continuing to work with you in the future.

If you require any additional information, please do not hesitate to contact our exclusive distributor in Poland, Paramedyk.

Very Respectfully,

Brandon T. Smith  
Director of International Sales  
Tactical Medical Solutions, LLC
