The top view shows a rectangular array of 10 microstrip elements, arranged in two columns of five. Each element is a horizontal, elongated oval shape. The array is centered within a square boundary. Concentric dashed circles are drawn around the center of the array, with the outermost circle having a radius of approximately 100 mm. Dashed lines also indicate the horizontal and vertical centerlines of the array. Feed lines are shown as solid lines extending from the left and right sides of the array, with a small gap between the array and the feed lines.
